

EXPERIMENT 29

In your GitHub repository, create a new branch called feature-login. Implement a simple login function in a login.py file. After completing the function, create a pull request to merge feature-login into the main branch.

Tasks:

- Create a new branch feature-login.
- Add a login.py file with a simple login function.
- Commit the changes and push them to GitHub.
- Create a pull request from feature-login to main and merge it.

Steps:

Step 1: Open the cloned repository

1. Open the previously cloned GitHub repository in **Visual Studio Code**.
2. Open:
3. Terminal → New Terminal
4. Type the following commands:
 - pwd
 - get-location
 - dir
 - cd github-collaboration-lab-1
 - git status
5. Check the current branch using:
6. git branch
7. The main branch should be displayed.

```
PS C:\AKTCHAYA A> pwd
Path
----
C:\AKTCHAYA A

PS C:\AKTCHAYA A> Get-Location
Path
----
C:\AKTCHAYA A

PS C:\AKTCHAYA A> dir
Directory: C:\AKTCHAYA A

Mode                LastWriteTime         Length
----                -
d-----          12-08-2025         21:25

PS C:\AKTCHAYA A> cd Github-Collaboration-Lab-1
PS C:\AKTCHAYA A\Github-Collaboration-Lab-1> git status
On branch main
Your branch is up to date with 'origin/main'.

nothing to commit, working tree clean
PS C:\AKTCHAYA A\Github-Collaboration-Lab-1> git branch
* main
```

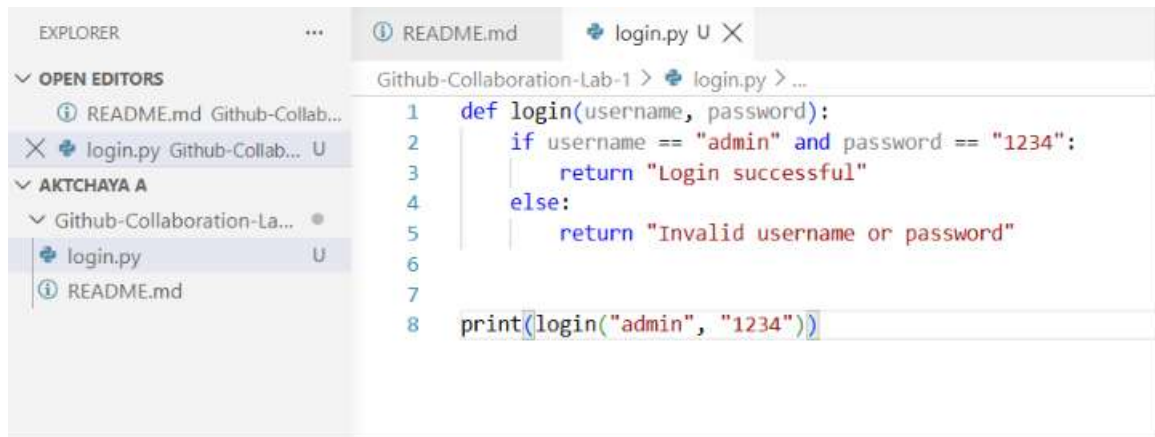

Step 2: Create the feature-login branch

- Create a new branch using:
`git checkout -b feature-login`
- Then verify the branch:
`git branch`
- The output should show:
feature-login
main

```
PS C:\AKTCHAYA A\Github-Collaboration-Lab-1> git checkout -b feature-login
Switched to a new branch 'feature-login'
PS C:\AKTCHAYA A\Github-Collaboration-Lab-1> git branch
* feature-login
main
```

Step 3: Create the login.py file

- In the VS Code Explorer:
- Right-click the repository folder.
- Select **New File**.
- Name the file:
login.py
- Add the following Python code:
def login(username, password):
 if username == "admin" and password == "1234":
 return "Login successful"
 else:
 return "Invalid username or password"
 print(login("admin", "1234"))
- Save the file using **Ctrl + S**.

Step 4: Execute the login program

- Run the program using:

`python login.py`

- The expected output is:

Login successful

```
main
PS C:\AKTCHAYA A\Github-Collaboration-Lab-1> python login.py
Login successful
```

Step 5: Check the Git status

- Check the status of the repository:

`git status`

- The output should indicate that login.py is an untracked file like:

On branch feature-login

Untracked files:

login.py

```
PS C:\AKTCHAYA A\Github-Collaboration-Lab-1> git status
On branch feature-login
Untracked files:
  (use "git add <file>..." to include in what will be committed)
    login.py

nothing added to commit but untracked files present (use "git add" to track)
```

Step 6: Stage the file

- Stage the new file using:
`git add login.py`
- Then verify the status:
`git status`
- The output should show:
Changes to be committed:
new file: login.py

```
PS C:\AKTCHAYA A\Github-Collaboration-Lab-1> git status
On branch feature-login
Untracked files:
  (use "git add <file>..." to include in what will be committed)
    login.py

nothing added to commit but untracked files present (use "git add" to track)
```

Step 7: Commit the changes

- Commit the staged file using:
`git commit -m "Added login function"`
- A successful commit will display a message similar to:
[feature-login abc1234] Added login function
1 file changed
create mode 100644 login.py

```
PS C:\AKTCHAYA A\Github-Collaboration-Lab-1> git commit -m "Added login function"
[feature-login b0b7249] Added login function
1 file changed, 8 insertions(+)
create mode 100644 login.py
```

Step 8: Push the branch to GitHub

- Push the feature-login branch to GitHub:
`git push -u origin feature-login`
- A successful push will show something similar to:
[new branch] feature-login -> feature-login

```
PS C:\AKTCHAYA A\Github-Collaboration-Lab-1> git push -u origin feature-login
Enumerating objects: 11, done.

remote:
remote: Create a pull request for 'feature-login' on GitHub by visiting:
remote:   https://github.com/aktchaya02/Github-Collaboration-Lab-1/pull/new/feature-login
remote:
To https://github.com/aktchaya02/Github-Collaboration-Lab-1.git
 * [new branch]      feature-login -> feature-login
branch 'feature-login' set up to track 'origin/feature-login'.
```

Step 9: Enter Pull Request details

- Enter a suitable title, for example:
Add login functionality
- You can add a description such as:
Added a simple login function using Python.
- Click:

Create pull request

Open a pull request

Create a new pull request by comparing changes across two branches. If you need to, you can also [compare across forks](#). [Learn more about diff comparisons here](#).

 base: **main**  compare: **feature-login**

✓ **Able to merge.** These branches can be automatically merged.

Add a title *

Added login function 

Add a description

WritePreview

H B I           

Added a simple login function using Python

 Markdown is supported  Paste, drop, or click to add files

Create pull request 

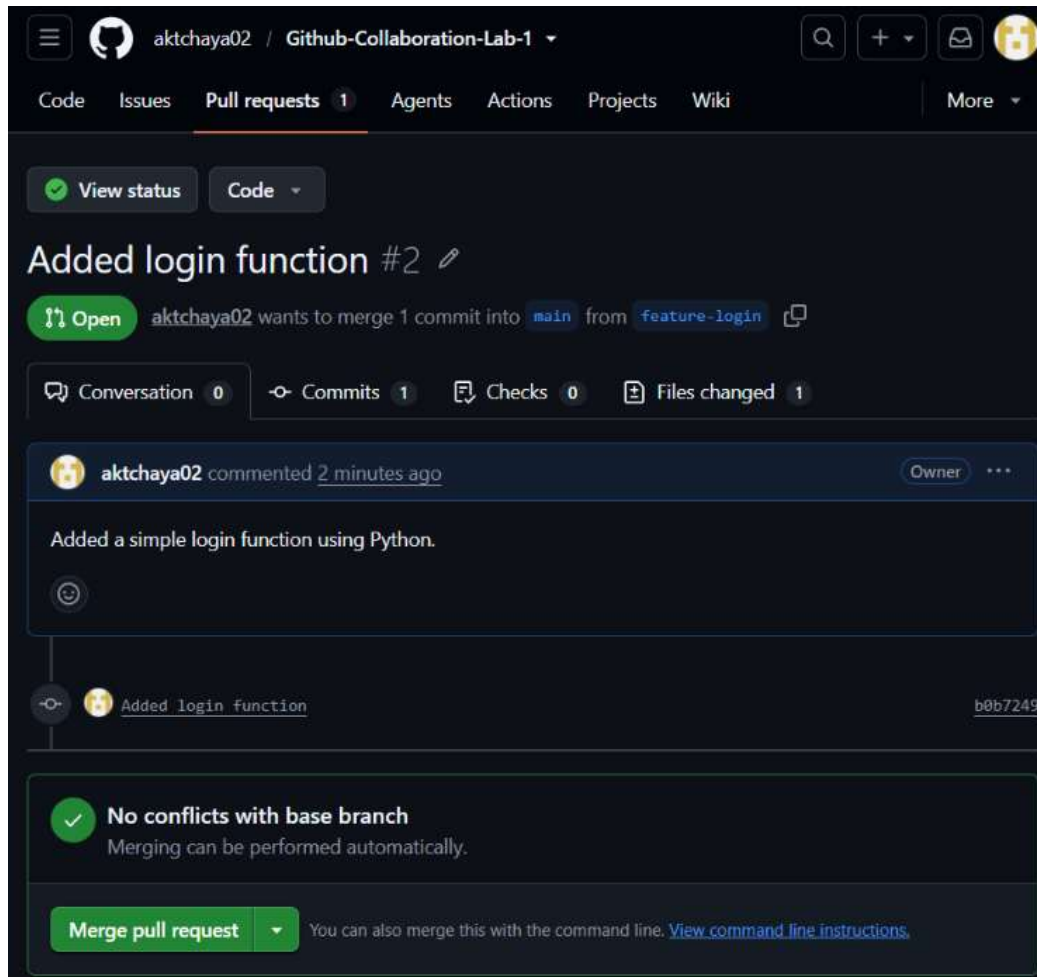

Step 10: Merge the Pull Request

- On the Pull Request page, click:

Merge pull request

- Then click:

Confirm merge

Step 11: Verify the changes in main

- Go back to the repository's **Code** page.
- Select the:
 - main
 - branch.
- Verify that login.py is now present in the main branch.
- Open login.py and verify that the login function is available.
